*40 Sonnets* Don Paterson 2017-05-02 This collection, which won the 2015 Costa Poetry Award, is an exhibition of the Dundee-born poet's stunningly accomplished adoption of the sonnet's ancient structure This collection from Don Paterson, his first since the Forward Prize-winning *Rain* in 2009, is a series of forty luminous sonnets. Some take a traditional form, while others experiment with the reader's conception of the sonnet, but they all share the lyrical intelligence and musical gift that has made Paterson one of our most celebrated poets. Addressed to friends and enemies, the living and the dead, children, musicians, poets, and dogs, these poems are as ambitious in their scope and tonal range as in the breadth of their concerns. Here, voices call home from the blackout and the airlock, the storm cave and the séance, the coal shed, the war, the highway, the forest, and the sea. These are voices frustrated by distance and darkness, which ring with the "sound that fades up from the hiss, / like a glass some random draught had set ringing, / now full of its only note, its lonely call." In 40 Sonnets, Paterson returns to some of his central themes—contradiction and strangeness, tension and transformation, the dream world, and the divided self—in some of the most powerful and formally assured poems of his career.

**Resurrecting Bertha** Rob Siegel 2019-09-15 To most people, cars are just appliances to be disposed of when they rust, become unreliable, or are outgrown. But to car people, it's different. Cars are like photographs that occupy physical space. They hold aromas that trigger memories, and remind us of who we once were. In addition, to some people, the relationship with the car itself is a real thing. Many enthusiasts pine for the cars of their youth, regret that they ever let them go, and yearn and search for them the way people do with old lovers, hoping to find them and rekindle that old spark. In Resurrecting Bertha, Rob Siegel assures you that this is normal (well, as normal as anything is with car people), and embarks on this journey himself. Writing in his trademark Hack Mechanic voice that's enthralled readers for 35 years, Rob describes his original eight-year relationship with his highly-modified 1975 BMW 2002 "Bertha," selling the car to a dear friend, its 26 years of storage, and buying it back in a weak whisky-soaked moment only to experience the "oh dear God what did I just do" regret when he raises the long-closed garage door and comes face-to-face with the badly deteriorated car. The book details the steps Rob went through to get the car running, then driving, then sufficiently sorted to make a 2000-mile drive, and how the reconnection with the car was so much deeper than he expected. Resurrecting Bertha is about more than just the nuts and bolts; it's about deciding what's important, the joy of doing good, and how, if you do it right, not only can you go home again, but you can do so in the same car.

In his new book, Just Needs a Recharge: The Hack Mechanic Guide to Vintage Air Conditioning, Rob Siegel details exactly what's needed to resurrect long-dead air conditioning in a vintage car, or install a/c in a car that never had it. In a level of detail not found in any other automotive a/c book, Rob reveals what you need to know about flare and o-ring fittings, upgrading to a rotary-style compressor and a parallel-flow condenser, making or specifying custom hoses, and selecting refrigerant so that the a/c blows cold enough to be usable. Although the book draws from Rob's BMW experience (with specifics for the BMW 2002 and 3.0CS), and concentrates on vintage a/c systems (those that have flare fittings and originally contained R12), most of the information applies to any air conditioning system, foreign or domestic, vintage or modern. Written in Rob's entertaining Hack Mechanic narrative voice, and including 240 photographs and illustrations, the book covers theory, the choice of refrigerant (R12, R134a, other EPA-approved, non-EPA-approved), legality, tools for a/c work, fittings and sizes, the compressor, the evaporator assembly and expansion valve or orifice tube, the condenser and fan, the receiver/drier or accumulator, electrical connections and compressor cycling, connecting and using manifold gauges, the basic steps for a/c rejuvenation, from-scratch a/c retrofit, making and installing hoses, flushing the system, pressure-testing and leak detection, evacuating and charging the system troubleshoooting, and other things that heat up the cabin.

*Identités Régionales Et Nationales en Europe Aux XIXe Et XXe Siècles* Michael G Mandumal 1998-07-03 In late 20th-century Europe, both national and regional loyalties have retained a surprising strength and topicality, despite the advance of supra-national integration. This volume addresses some specific aspects of this phenomenon that lay at the centre of the interdisciplinary work of the first European Forum of the European University Institute in Florence during the academic year 1993/94. It aims at contributing to a better understanding of the origins and the nature of territorially-based identities in Europe, and it also offers some analysis of current problems arising at various levels of the relationships between regional, national and international structures. The contributions to this volume refer to three major fields of historical and contemporary research: The study of the factors that constitute territorially-based imagined communities. Under what conditions can certain cultural characteristics shared by a given group (such as language, religious affiliation or cultural heritage) acquire social and political meaning in a process of creating territorial loyalties? And how do regional and national loyalties relate to other patterns of particularist group identities? In examining these questions, special attention is given to the concept of primordial identities and to the problem of ethnicity. The analysis of the mechanisms by which particular group interests (social, political, or cultural) are translated into narratives of regional or national identity. The loyalty to a community within a given territory is never merely a product of 'invention' and of arbitrary ideological indoctrination.

**Aquaculture Engineering** Odd-Ivar Lekang 2013-01-15 As aquaculture continues to grow at a rapid pace, understanding theengineering behind aquatic production facilities is of increasingimportance for all those working in the industry. Aquacultureengineering requires knowledge of the many general aspects ofengineering such as material technology, building design andconstruction, mechanical engineering, and environmentalengineering. In this comprehensive book now in its secondedition, author Odd-Ivar Lekang introduces these principles anddemonstrates how such technical knowledge can be applied toaquaculture systems. Review of the first edition: 'Fish farmers and other personnel involved in the aquacultureindustry, suppliers to the fish farming business and designers andmanufacturers will find this book an invaluable resource. The bookwill be an important addition to the shelves of all libraries inuniversities and research institutions where aquaculture,agriculture and environmental sciences are studied andtaught.' **Internal Combustion Engines** Institution of Mechanical Engineers 2014-10-10 This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets

**Extreme Economies** Richard Davies 2019-09-05 \*Winner of the Enlightened Economist Prize 2019\* \*Winner of Debut Writer of the Year at the Edward Stanford Travel Writing Awards 2020\* \*Longlisted for the Financial Times & McKinsey Business Book of the Year Award 2019\* 'Extreme Economies is a revelation - and a must-read.' Andy Haldane, Chief Economist at the Bank of England To understand how humans react and adapt to economic change we need to study people who live in harsh environments. From death-row prisoners trading in institutions where money is banned to flourishing entrepreneurs in the world's largest refugee camp, from the unrealised potential of cities like Kinshasa to the hyper-modern economy of Estonia, every life in this book has been hit by a seismic shock, violently broken or changed in some way. In his quest for a purer view of how economies succeed and fail, Richard Davies takes the reader off the beaten path to places where part of the economy has been repressed, removed, destroyed or turbocharged. He tells the personal stories of humans living in these extreme situations, and of the financial infrastructure they create. Far from the familiar stock reports, housing crises, or banking scandals of the financial pages, Extreme Economies reveals the importance of human and social capital, and in so doing tells small stories that shed light on today's biggest economic questions. 'A highly original approach to understanding what really makes economies tick.' Mervyn King, former Governor of the Bank of England
