*Broken Landscape* Frank Pommersheim 2009-09-02 Broken Landscape is a sweeping chronicle of Indian tribal sovereignty under the United States Constitution and the way that legislators have interpreted and misinterpreted tribal sovereignty since the nation's founding. Frank Pommersheim, one of America's leading scholars in Indian tribal law, offers a novel and deeply researched synthesis of this legal history from colonial times to the present, confronting the failures of constitutional analysis in contemporary Indian law jurisprudence. He demonstrates that the federal government has repeatedly failed to respect the Constitution's recognition of tribal sovereignty. Instead, it has favored excessive, unaccountable authority in its dealings with tribes. Pommersheim argues that the Supreme Court has strayed from its Constitutional roots as well, consistently issuing decisions over two centuries that have bolstered federal power over the tribes. Closing with a proposal for a Constitutional amendment that would reaffirm tribal sovereignty, Broken Landscape challenges us to finally accord Indian tribes and Indian people the respect and dignity that are their due.

**Science, Evolution, and Creationism** Institute of Medicine 2008-01-28 How did life evolve on Earth? The answer to this question can help us understand our past and prepare for our future. Although evolution provides credible and reliable answers, polls show that many people turn away from science, seeking other explanations with which they are more comfortable. In the book Science, Evolution, and Creationism, a group of experts assembled by the National Academy of Sciences and the Institute of Medicine explain the fundamental methods of science, document the overwhelming evidence in support of biological evolution, and evaluate the alternative perspectives offered by advocates of various kinds of creationism, including "intelligent design." The book explores the many fascinating inquiries being pursued that put the science of evolution to work in preventing and treating human disease, developing new agricultural products, and fostering industrial innovations. The book also presents the scientific and legal reasons for not teaching creationist ideas in public school science classes. Mindful of school board battles and recent court decisions, Science, Evolution, and Creationism shows that science and religion should be viewed as different ways of understanding the world rather than as frameworks that are in conflict with each other and that the evidence for evolution can be fully compatible with religious faith. For educators, students, teachers, community leaders, legislators, policy makers, and parents who seek to understand the basis of evolutionary science, this publication will be an essential resource.

**Life Before Birth** Bonnie Steinbock 2011-07-11 Life Before Birth provides a coherent framework for addressing bioethical issues in which the moral status of embryos and fetuses is relevant. It is based on the "interest view" which ascribes moral standing to beings with interests, and connects the possession of interests with the capacity for conscious awareness or sentience. The theoretical framework is applied to ethical and legal topics, including abortion, prenatal torts, wrongful life, the crime of feticide, substance abuse by pregnant women, compulsory cesareans, assisted reproduction, and stem cell research. Along the way, difficult philosophical problems, such as identity and the non-identity problem are thoroughly explored. The book will be of interest not only to philosophers, but also physicians, lawyers, policy makers, and anyone perplexed by the many difficulties surrounding the unborn. "Bonnie Steinbock's excellent book is . . . consistent, thoroughgoing, and intelligible." --Nature "Steinbock's book is valuable for all interested in the ethical/legal issues surrounding abortion, prenatal injury and liability, maternal-fetal conflict, and fetal/embryo research. The author provides an excellent historical overview of these issues, but she also addresses the issues from the stance of a particular theory of moral status, namely, interest theory. This gives coherence to her discussion as well as allowing testing of the viability of interest theory." --Choice "A focused, lucid, analytically fine-grained discussion of a wide variety of problems. . . extremely useful as a survey of the current state of the debate." --Religious Studies Review "Merits serious consideration by physicians. Steinbock's interests-based approach treats all questions as open -- another and most welcome breath of fresh air." -New England Journal of Medicine "An extremely valuable contribution to the literature. The author carefully identifies the many bioethical issues to which the status of embryos and fetuses is relevant....She thoroughly reviews the extensive medical, bioethical, and legal literature on all of these issues, offering well-developed critiques of many standard positions. She articulates and thoughtfully defends interesting positions on all of these topics. Anyone with an interest in these issues will learn a great deal from her knowledgeable and judicious treatment of them." -- The Journal of Clinical Ethics

**Math with Bad Drawings** Ben Orlin 2018-09-18 A hilarious reeducation in mathematics-full of joy, jokes, and stick figures-that sheds light on the countless practical and wonderful ways that math structures and shapes our world. In Math With Bad Drawings, Ben Orlin reveals to us what math actually is; its myriad uses, its strange symbols, and the wild leaps of logic and faith that define the usually impenetrable work of the

mathematician. Truth and knowledge come in multiple forms: colorful drawings, encouraging jokes, and the stories and insights of an empathetic teacher who believes that math should belong to everyone. Orlin shows us how to think like a mathematician by teaching us a brand-new game of tic-tac-toe, how to understand an economic crises by rolling a pair of dice, and the mathematical headache that ensues when attempting to build a spherical Death Star. Every discussion in the book is illustrated with Orlin's trademark "bad drawings," which convey his message and insights with perfect pitch and clarity. With 24 chapters covering topics from the electoral college to human genetics to the reasons not to trust statistics, *Math with Bad Drawings* is a life-changing book for the math-estranged and math-enamored alike.

**Sustainability Through the Lens of Environmental Sociology** 2018-02-14 Our planet is undergoing radical environmental and social changes. Sustainability has now been put into question by, for example, our consumption patterns, loss of biodiversity, depletion of resources, and exploitative power relations. With apparent ecological and social limits to globalization and development, current levels of consumption are unsustainable, inequitable, and inaccessible to the majority of humans. Understanding and attaining sustainability is a crucial matter at a time when our planet is in peril--environmentally, economically, socially, and politically. Since its official inception in the 1970s, environmental sociology has provided a powerful lens to understanding the challenges, possibilities and modes of sustainability. Most chapters in this book were published as peer-reviewed articles in *Sustainability* in its special issue "Sustainability through the Lens of Environmental Sociology," providing an environmental sociology approach to understanding and achieving the widely used notion of "sustainability." This edited collection covers, among other topics, the inherent discursive formations of environmental sociology, conceptual tools and paradoxes, competing theories and practices, and their complex implications on our society at large. Chapters in this book specifically focus on how sustainable development has been understood through different theoretical lenses in environmental sociology, such as ecological modernization, policy/reformist sustainable development, and critical structural approaches (such as the treadmill of production, ecological Marxism, metabolic rift theory, etc.); and how sustainable development has been practiced in, or by, various stakeholders, such as states, corporations, and local communities, for various ends, through the use of specific case studies, showing, for example, the discursive shifts, dynamic formations, and diverse contours of sustainable development. The range of relevant topics includes: - Environmental sociology as a field of inquiry for sustainability - Historical context of sustainable development in environmental sociology - Nature-society relationship in environmental sociology - Theories/approaches to sustainability discourse in environmental sociology -

Environmentalism/environmental movements for sustainability - Empirical cases (such as climate change, biodiversity, food, certification, etc.) through the lens of environmental sociology

**The Color of Citizenship** Diego A. von Vacano 2012-01-18 The role of race in politics, citizenship, and the state is one of the most perplexing puzzles of modernity. While political thought has been slow to take up this puzzle, Diego von Vacano suggests that the tradition of Latin American and Hispanic political thought, which has long considered the place of mixed-race peoples throughout the Americas, is uniquely well-positioned to provide useful ways of thinking about the connections between race and citizenship. As he argues, debates in the United States about multiracial identity, the possibility of a post-racial world in the aftermath of Barack Obama, and demographic changes owed to the age of mass migration will inevitably have to confront the intellectual tradition related to racial admixture that comes to us from Latin America. Von Vacano compares the way that race is conceived across the writings of four thinkers, and across four

different eras: the Spanish friar Bartolomé de Las Casas writing in the context of empire; Simón Bolívar writing during the early republican period; Venezuelan sociologist Laureano Vallenilla Lanz on the role of race in nationalism; and Mexican philosopher José Vasconcelos writing on the aesthetic approach to racial identity during the cosmopolitan, post-national period. From this comparative and historical survey, von Vacano develops a concept of race as synthetic, fluid and dynamic -- a concept that will have methodological, historical, and normative value for understanding race in other diverse societies.

*At Risk* Piers Blaikie 2014-01-21 The term 'natural disaster' is often used to refer to natural events such as earthquakes, hurricanes or floods. However, the phrase 'natural disaster' suggests an uncritical acceptance of a deeply engrained ideological and cultural myth. *At Risk* questions this myth and argues that extreme natural events are not disasters until a vulnerable group of people is exposed. The updated new edition confronts a further ten years of ever more expensive and deadly disasters and discusses disaster not as an aberration, but as a signal failure of mainstream 'development'. Two analytical models are provided as tools for understanding vulnerability. One links remote and distant 'root causes' to 'unsafe conditions' in a 'progression of vulnerability'. The other uses the concepts of 'access' and 'livelihood' to understand why some households are more vulnerable than others. Examining key natural events and incorporating strategies to create a safer world, this revised edition is an important resource for those involved in the fields of environment and development studies.

**Unbroken** Laura Hillenbrand 2010-11-16 #1 NEW YORK TIMES BESTSELLER • NOW A MAJOR MOTION PICTURE • Look for special features inside. Join the Random House Reader's Circle for author chats and more. In boyhood, Louis Zamperini was an incorrigible delinquent. As a teenager, he channeled his defiance into

running, discovering a prodigious talent that had carried him to the Berlin Olympics. But when World War II began, the athlete became an airman, embarking on a journey that led to a doomed flight on a May afternoon in 1943. When his Army Air Forces bomber crashed into the Pacific Ocean, against all odds, Zamperini survived, adrift on a foundering life raft. Ahead of Zamperini lay thousands of miles of open ocean, leaping sharks, thirst and starvation, enemy aircraft, and, beyond, a trial even greater. Driven to the limits of endurance, Zamperini would answer desperation with ingenuity; suffering with hope, resolve, and humor; brutality with rebellion. His fate, whether triumph or tragedy, would be suspended on the fraying wire of his will. Unbroken is an unforgettable testament to the resilience of the human mind, body, and spirit, brought vividly to life by Seabiscuit author Laura Hillenbrand. **What is a Disaster?** Ronald W. Perry 2005 What is a Disaster? Addresses the most basic question in the field: that of defining the phenomenon of study. For theoretical advancement, it is important that researchers begin to develop a consensus about the meaning of disasters and related phenomena. With the

rise in international terrorism, one must clarify whether these events are disasters and if so, what kind of disasters. Similarly, in addition to natural disasters, do we include riots, explosions, nuclear power plant accidents, damn collapses, and land subsidence under the same conceptual umbrella? What practical and theoretical differences does it make if the same label is used or not used for such different situations? What is a Disaster? Brings together twelve social scientists representing eight disciplines and seven countries to share their definition and vision of disasters. In the process, a wide range of views are expressed and issues raised regarding the relationship of academic versus practical definitions, the impact of grouping types of disasters in different ways, and the epistemologies on which theoretical growth should rest. The forum provided involves the presentation of each author's views, followed by a discussant's critique, and closed with a response from the author. The editor's close the volume with discussions of the theoretical framework of disaster research and an agenda for disaster research in the twenty-first century.

**Arrowsmith** Sinclair Lewis 2021-01-01 First published in 1925, 'Arrowsmith' is a novel by American author Sinclair Lewis. It is arguably the earliest major novel to deal with the culture of science. It was written in the period after the reforms of medical education flowing from the Flexner Report on Medical Education in the United States and Canada: A Report to the Carnegie Foundation for the Advancement of Teaching, 1910, which had called on medical schools in the United States to adhere to mainstream science in their teaching and research.

**Child Protective Services** Diane DePanfilis 2003 From the Preface: This manual, *Child Protective Services: A Guide for Caseworkers*, examines the roles and responsibilities of child protective services (CPS) workers, who are at the forefront of every community's child protection efforts. The manual describes the basic stages of the CPS process and the steps necessary to accomplish each stage: intake, initial assessment or investigation, family assessment, case planning, service provision, evaluation of family progress, and case closure. Best practices and critical issues in casework practice are underscored throughout. The primary audience for this manual includes CPS caseworkers, supervisors, and administrators. State and local CPS agency trainers may use the manual for preservice or inservice training of CPS caseworkers, while schools of social work may add it to class reading lists to orient students to the field of child protection. In addition, other professionals and concerned community members may consult the manual for a greater understanding of the child protection process. This manual builds on the information presented in *A Coordinated Response to Child Abuse and Neglect: The Foundation for Practice*. Readers are encouraged to begin with that manual as it addresses important information on which CPS practice is based—including definitions of child maltreatment, risk factors, consequences, and the Federal and State basis for intervention. Some manuals in the series also may be of interest in understanding the roles of other professional groups in responding to child abuse and neglect, including: Substance abuse treatment providers; Domestic violence victim advocates; Educators; Law enforcement personnel. Other manuals address special issues, such as building partnerships and working with the courts on CPS cases.

**Notes from the Underground** Fyodor Dostoyevsky 2013-05-27 Fyodor Dostoyevsky's "Notes from Underground" is considered by many to be the first existentialist novel. It presents itself as an excerpt from the rambling memoirs of a bitter, isolated, unnamed narrator (generally referred to by critics as the Underground Man) who is a retired civil servant living in St. Petersburg. The first part of the story is told in monologue form, or the underground man's diary, and attacks emerging Western philosophy, especially Nikolay Chernyshevsky's "What Is to Be Done?" The second part of the book is called "À propos of the Wet Snow," and describes certain events that, it seems, are destroying and sometimes renewing the underground man, who acts as a first person, unreliable narrator.

These fascinating tales follow every element on the table as they play out their parts in human history, and in the lives of the (frequently) mad scientists who discovered them. science with the classic lore of invention, investigation, and discovery--from the Big Bang through the end of time. \*Though solid at room temperature, gallium is a moldable metal that melts at 84 degrees Fahrenheit. **Flow Past Highly Compliant Boundaries and in Collapsible Tubes** Peter W. Carpenter 2013-11-11 The IUTAM Symposium on Flow in Collapsible Tubes and Past Other Highly Compliant Boundaries was held on 26-30 March, 2001, at the University of Warwick. As this was the first scientific meeting of its kind we considered it important to mark the occasion by producing a book. Accordingly, at the end of the Symposium the Scientific Committee met to discuss the most appropriate format for the book. We wished to avoid the format of the conventional conference book consisting of a large number of short articles of varying quality. It was agreed that instead we should produce a limited number of rigorously refereed and edited articles by selected participants who would aim to sum up the state of the art in their particular research area. The outcome is the present book. Peter W. Carpenter, Warwick Timothy J. Pedley, Cambridge May, 2002. VB SCIENTIFIC COMMITTEE Co-Chair: P.W. Carpenter, Engineering, Warwick, UK Co-Chair: T.J. Full Preparation 2001

**Learning and Understanding** National Research Council 2002-08-06 This book takes a fresh look at programs for advanced studies for high school students in the United States, with a particular focus on the Advanced Placement and the International Baccalaureate programs, and asks how advanced studies can be significantly improved in general. It also examines two of the core issues surrounding these programs: they can have a profound impact on other components of the education system and participation in the programs has become key to admission at selective institutions of higher education. By looking at what could enhance the quality of high school advanced study programs as well as what precedes and comes after these programs, this report provides teachers, parents, curriculum developers, administrators, college science and mathematics faculty, and the educational research community with a detailed assessment that can be used to guide change within advanced study programs.
