System Recovery & Evacuation Esco Institute 2020-12-31 When installing or servicing an air conditioning or refrigeration system, two of the most important tasks performed by technicians are refrigerant recovery and system evacuation. In order to perform these tasks properly, and in a safe manner, technicians need to understand the theory behind them, having a working knowledge of the equipment and tools used, and employ accepted industry best practices. This e-book walks through each step of both tasks, while covering safety, theory, and application. Also covered are leak detection methods and filter drier use. System Recovery and Evacuation was written by HVACR instructors for HVACR instructors to provide sound, relevant information in a single source. This e-book provides students and practicing technicians with the information and knowledge necessary to understand refrigerant recovery, system evacuation, leak detection, and filter driers. It is full of color illustrations and includes worksheets that provide students and practicing technicians with the information and knowledge necessary to accurately and safely install or service air conditioning and refrigeration

systems. The end of the e-book contains fill-in-the-blank questions that review the content of the entire manual.

Remediating Transcultural Memory Dagmar Brunow 2015-09-25 The impact of digital global media, geopolitical changes and migration demands new theorizations within memory studies. Despite the growing field of media memory studies, the impact from film and media studies has been scarce within memory studies. This unique study offers new theorizations of three crucial concepts for media memory studies: remediation, transculturality and the archive. This book takes a closer look at the media specificity of archival footage and how it is adapted, translated and appropriated. In its original approach this work reflects upon the role of documentary film images for the construction of memory. By merging film and media studies with memory studies the work offers multiple theoretical and methodological approaches for everyone interested in the heritage of audiovisual media: film and media scholars, memory scholars, historians, art historians, social scientists, librarians or archivists, curators and festival programmers alike.

With God in the Crucible Peter Storey 2010-09-01 Often the church is accused of being so embedded in the culture that effective prophecy leveled at the culture is impossible. But this book illustrates that there was a time and a place where the church community was faithful to its mission as the body of Christ, as church leaders led, people lifted high the cross, and they marched into the uncertainty that still prevails. Here is a time and place where the call to risky discipleship was answered not with whimpers, whines, and excuses, but with the power of faithful Christians living out their call. This book illustrates what it can mean to faithfully answer the call to discipleship and God's service. Many people wonder if they would be able to stand up for their faith if it meant great personal sacrifice or the sacrifice of people they love. They wonder what they would risk for their faith, if anything. In the United States where cost/benefit analysis is a popular way to assess risk, many Christians wonder if they might not have to stand alone, because too many see the risks as too costly. As suggested by the title, this book draws upon a collection of sermons and addresses given by Peter Storey in a variety of contexts between 1966 and 1993. The original audiences ranged from the all-white Central Methodist Church in Johannesburg, to the South African Council of Churches, to the nation of South Africa, and to the world. All of these sermons and addresses are directly related to specific historical events: security police confrontations, beatings, and tear-gassings in churches around the country of South Africa; an imposed State of Emergency; the murder of 14-year-old Stompie Sepie by Winnie Mandela's thugs; and the violent jockeying for power between Mandela's African National Congress, Chief Mangosutho Buthelizi's Inkatha Movement, and F. W. de Klerk's regime. The book offers the full perspective of what it means to speak truth, empower people to stand for the truth, and to pastor souls during times when living truth seems almost impossible. Key Features: 1. Foreword by Desmond Tutu 2. 15 chapters, each including a brief description of the original context, the sermon and its connection with the present, and a prayer 3. Epilogue by Will Willimon

A First Course in Factor Analysis Andrew L. Comrey 2013-11-12 The goal of this book is to foster a basic understanding of factor analytic techniques so that readers can use them in their own research and critically evaluate their use by other researchers. Both the underlying theory and correct application are emphasized. The theory is presented through the mathematical basis of the most common factor analytic models and several methods used in factor analysis. On the application side, considerable attention is given to the extraction problem, the rotation problem, and

the interpretation of factor analytic results. Hence, readers are given a background of understanding in the the theory underlying factor analysis and then taken through the steps in executing a proper analysis -- from the initial problem of design through choice of correlation coefficient, factor extraction, factor rotation, factor interpretation, and writing up results. This revised edition includes introductions to newer methods -- such as confirmatory factor analysis and structural equation modeling -- that have revolutionized factor analysis in recent years. To help remove some of the mystery underlying these newer, more complex methods, the introductory examples utilize EQS and LISREL. Updated material relating to the validation of the Comrey Personality Scales also has been added. Finally, program disks for running factor analyses on either an IBM-compatible PC or a mainframe with FORTRAN capabilities are available. The intended audience for this volume includes talented but mathematically unsophisticated advanced undergraduates, graduate students, and research workers seeking to acquire a basic understanding of the principles supporting factor analysis. Disks are available in 5.25" and 3.5" formats for both mainframe programs written in Fortran and IBM PCs and compatibles running a math co-processor.

Romancing the Past Gabrielle M. Spiegel 1993 "Reading Spiegel's book is like seeing the scattered pieces of a jigsaw puzzle of history and literature suddenly assembled in a dazzling new image, a picture that could not have been made without the master piece, the manuscript that Professor Spiegel was the first person in almost 800 years to read and interpret. Her effort is a tour de force of no mean proportion."-- Stephen G. Nichols Jr., author of Romanesque Signs

Respawn Colin Milburn 2018-12-14 In Respawn Colin Milburn examines the connections between video games, hacking, and science fiction that galvanize technological activism and technological communities. Discussing a wide range of games, from Portal and Final Fantasy VII to Super Mario Sunshine and Shadow of the Colossus, Milburn illustrates how they impact the lives of gamers and non-gamers alike. They also serve as resources for critique, resistance, and insurgency, offering a space for players and hacktivist groups such as Anonymous to challenge obstinate systems and experiment with alternative futures. Providing an essential walkthrough guide to our digital culture and its high-tech controversies, Milburn shows how games and playable media spawn new modes of engagement in a computerized world.

Unworthy Anneli Rufus 2014-05-15 "Self-loathing is a dark land studded with booby traps. Fumbling through its dark underbrush, we cannot see what our trouble actually is: that we are mistaken about ourselves. That we were told lies long ago that we, in love and loyalty and fear, believed. Will we believe ourselves to death?" —from Unworthy As someone who has struggled with low self-esteem her entire life, Anneli Rufus knows only too well how the world looks through the eyes of those who are not comfortable in their own skin. In Unworthy, Rufus boldly explores how a lack of faith in ourselves can turn us into our own worst enemies. Drawing on extensive research, enlightening interviews, and her own poignant experiences, Rufus considers the question: What personal, societal, biological, and historical factors coalesced to spark this secret epidemic, and what can be done to put a stop to it? She reveals the underlying sources of low self-esteem and leads us through strategies for positive change.

Alice in Quantumland Robert Gilmore 1995-07-21 In this cleverly conceived book, physicist Robert Gilmore makes accessible some complex concepts in quantum mechanics by sending Alice to Quantumland–a whole new Wonderland, smaller than an atom, where each attraction demonstrates a different aspect of quantum theory. Alice unusual encounters, enhanced by illustrations by Gilmore himself, make the Uncertainty Principle, wave

functions, the Pauli Principle, and other elusive concepts easier to grasp.

Obscene in the Extreme Rick Wartzman 2008 Describes how, after its publication in 1939 and then becoming the nation's best-selling book, a great conflict arose in Kern County, California, as a giant cotton grower and a determined librarian went head-to-head over the issue of censorship with public burnings of this masterpiece at center stage.

Classical Masculinity and the Spectacular Body on Film Daniel O'Brien 2014-10-29 The cinema has often showcased the muscular male body, most notably in genres invoking classical Greco-Roman culture, whether peplum, epic or sword-and-sorcery. This book reassesses the classically-inflected action film as a significant cinematic form, often marginalized in media studies, that transcends such reductive labels as camp or kitsch. The focus is on the depiction of heroic masculinity, often characterized as reactionary or fascist, yet far more varied and contradictory, especially in relation to femininity and non-whiteness. These diverse representations of masculinity offer a major contribution to debates on maleness within and beyond academia that has been largely unexplored. In particular, Hercules in his many incarnations is one of the most important mythopoetic figures, on a par with King Arthur, Robin Hood, Tarzan and James Bond, informing popular cultural interpretations of manliness and the exaggerated male form.

Twelve Years a Slave Solomon Northup 2021-01-01 "Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." –an excerpt

The Politically Correct University Robert Maranto 2009 Political correctness if one of the primary enemies of freedom of thought in higher education today, undermining our ability to acquire, transmit, and process knowledge. Political correctness limits the variation of ideas by an ideologically driven concern for hue rather than view. This volume is not simply another rant; there are good data here, along with well-crafted, hard-to-ignore logical interpretations and arguments. It is the sort of work that those who adhere to idea-limiting notions of the university will try to trivialize. That alone should make it important reading. -- Michael Schwartz, president emeritus, Kent State University and Cleveland State University

Approaches to World Literature Joachim Küpper 2013-12-20 The present volume introduces new considerations on the topic of "World Literature", penned by leading representatives of the discipline from the United States, India, Japan, the Middle East, England, France and Germany. The essays revolve around the question of what, specifically in today's rapidly globalizing world, may be the productive implications of the concept of World Literature, which was first developed in the 18th century and then elaborated on by Goethe. The discussions include problems such as different script systems with varying literary functions, as well as questions addressing the relationship between ethnic self-description and cultural belonging. The contributions result from a conference that took place at the Dahlem Humanities Center, Freie Universität Berlin, in 2012.

The Development of Intersensory Perception David J. Lewkowicz 2013-05-13 This book provides the latest information about the development of intersensory perception -- a topic which has recently begun to receive a great deal of attention from researchers studying the general problem of perceptual development. This interest was inspired after the realization that unimodal perception of sensory

information is only the first stage of perceptual processing. Under normal conditions, an organism is faced with multiple, multisensory sources of information and its task is to either select a single relevant source of information or select several sources of information and integrate them. In general, perception and action on the basis of multiple sources of information is more efficient and effective. Before greater efficiency and effectiveness can be achieved, however, the organism must be able to integrate the multiple sources of information. By doing so, the organism can then achieve a coherent and unified percept of the world. The various chapters in this book examine the developmental origins of intersensory perceptual capacities by presenting the latest research on the development of intersensory perceptual skills in a variety of different species. By adopting a comparative approach to this problem, this volume as a whole helps uncover similarities as well as differences in the mechanisms underlying the development of intersensory integration. In addition, it shows that there is no longer any doubt that intersensory interactions occur right from the beginning of the developmental process, that the nature of these intersensory interactions changes as development progresses, and that early experience contributes in important ways to these changes.

Style and Reader Response Alice Bell 2021-02-08 Style and Reader Response: Minds, media, methods profiles the diversity of theoretical and methodological approaches in reception-oriented research in stylistics. Collectively, the chapters investigate how real readers, players, audiences, and viewers respond to, experience, and interpret texts. Contributions to the book investigate discourse types such as contemporary literature, poetry, political speeches, digital fiction, art exhibitions, and online news discourse. The volume also exemplifies the variety of empirical approaches in reception research, with contributors drawing on a range of methods including discussion groups, interviews, questionnaires, and think-aloud protocols with data analysed from both online and offline sources. Style and Reader Response makes an important contribution to an emerging paradigm within stylistics in which verifiable insights from readers are used to generate new models and new understandings of texts across media, with each essay demonstrating the centrality of empirical research for theoretical, methodological, and/or analytical advancements within and beyond stylistics.

An Introduction to Neural Networks Kevin Gurney 2018-10-08 Though mathematical ideas underpin the study of neural networks, the author presents the fundamentals without the full mathematical apparatus. All aspects of the field are tackled, including artificial neurons as models of their real counterparts; the geometry of network action in pattern space; gradient descent methods, including back-propagation; associative memory and Hopfield nets; and self-organization and feature maps. The traditionally difficult topic of adaptive resonance theory is clarified within a hierarchical description of its operation. The book also includes several real-world examples to provide a concrete focus. This should enhance its appeal to those involved in the design, construction and management of networks in commercial environments and who wish to improve their understanding of network simulator packages. As a comprehensive and highly accessible introduction to one of the most important topics in cognitive and computer science, this volume should interest a wide range of readers, both students and professionals, in cognitive science, psychology, computer science and electrical engineering.
